June 8, 2015

Honorable Richard Shelby  
Chairman  
Committee on Appropriations  
Subc. on Commerce, Justice, Science, and Related Agencies  
S-128 The Capitol  
Washington, DC 20510

Honorable Barbara Mikulski  
Ranking Minority Member  
Committee on Appropriations  
Subc. on Commerce, Justice, Science, and Related Agencies  
S-146A The Capitol  
Washington, DC 20510

Dear Chairman Shelby and Ranking Member Mikulski:

The undersigned members of The Census Project write to urge full funding of the U.S. Census Bureau’s Fiscal Year 2016 budget request in the Commerce, Justice, Science, and Related Agencies (CJS) appropriations bill. We strongly encourage you to reject ill-advised funding cuts included in the House bill (H.R. 2578), which we believe seriously threaten the Census Bureau’s ability to continue modernizing the 2020 Census and preserve the availability of American Community Survey (ACS) data for all communities. We also urge you to maintain the mandatory nature of the ACS, to ensure data reliability and contain costs.

The President requested $1.5 billion for the Census Bureau, including a ramp-up of $317 million ($663m total) for 2020 Census planning, a modest increase of $15 million ($257m total) for content and methodological improvements to the ACS, and a ramp-up of $13 million ($135m total) to prepare for the 2017 Economic Census. The House bill cuts the funding request for the Periodic Censuses and Programs account by 40 percent (-$495 m), and wipes out the entire proposed increase completely, a reduction that is unsustainable at this point in both the decennial census and Economic Census cycles.

In FY2016, the Census Bureau must begin to “operationalize” the 2020 Census design through IT systems development, methodological refinements, and preparations for the communications campaign and language and telephone questionnaire assistance, all in time for an end-to-end readiness test in 2018. New initiatives, including an unprecedented use of technology to collect and process census responses and reliance on administrative records to update the address list and reduce costly field
visits, could save more than $5 billion over the lifecycle cost of the census. But failure to invest in thorough development activities now could force the bureau to abandon some or all of these reforms next year, because the risk of fielding such sweeping reforms without complete testing is too high.

In a Statement of Administration Policy on H.R. 2578, OMB warned that the House Appropriations Committee funding level would “[prevent] the Census Bureau from developing, testing, and implementing critical cost saving innovations” for the 2020 Census. The Administration also cautioned that the proposed funding reduction for the ACS (20 percent cut from FY2015) threatens the availability of vital, irreplaceable demographic and economic data for rural communities, small areas (such as neighborhoods), and small population groups. The final House allocation would reduce these amounts even further.

The ACS, the modern version of the census long form, produces data integral to decision-making in the public, private, and non-profit sectors, ensuring that our nation can meet the needs of its citizens in a fiscally-responsible way, guided by objective, comparable and high-quality socio-economic data for all communities. We oppose language the House adopted that, essentially, would make response to our nation’s premier civic survey optional. Census Bureau field tests and the recent Canadian experience have shown that making response voluntary will lead to dramatically lower response rates, significantly higher costs (+90m/yr), and the possible loss of all reliable data for smaller (less populous) geographic areas, including rural counties, small cities, towns, neighborhoods and American Indian reservations. We urge you to reject this provision.

The Census Bureau is working hard to streamline the ACS and reduce response burden. It recently announced the elimination of two questions, and revisions to others; it also is researching the possibility of asking some questions less frequently or of a smaller sample of households, as well as replacing some questions with data collected through other government programs or by commercial entities. These efforts address congressional concerns about ACS burden, but thorough research and testing are necessary to ensure data quality because Congress itself allocates more than $415 billion annually to states and localities based on ACS data. Funding cuts in the House appropriations bill would threaten the timeliness of this important review and be counter-productive.

We recognize the fiscal constraints your committee faces and believe that continued investment in modern census methods and operations will yield significant lifecycle cost savings. Failure to develop production systems
through a robust acquisitions process and to refine sweeping operational reforms in FY2016 and beyond will put the accuracy of the 2020 Census at risk and almost certainly drive up costs against the wishes of the Congress. Likewise, lack of adequate funding to maintain a robust ACS sample and coverage will deprive Congress, state and local governments, and the private sector of data that guide prudent investments, uphold civil rights protections, and spur economic growth in communities of all sizes. Again, we urge you to provide sufficient funding for all Census Bureau programs as you consider the FY2016 CJS appropriations bill.

Thank you for your consideration of our views. Census Project Co-Directors Phil Sparks (psparks@ccmc.org), Mary Jo Hoeksema (paaapc@crosslink.net), and Terri Ann Lowenthal (TerriAnn2K@aol.com) would be pleased to answer any questions you may have.

Sincerely,

Barbara Everitt Bryant, Director, U.S. Census Bureau, 1989–1993
